

The electronic form of this issue, available as of May 12, 2008, at [www.plantphysiol.org](http://www.plantphysiol.org), is considered the journal of record.

**On the Cover:** The cover features a unique hologram of an artist's rendition of a DNA molecule superimposed onto a corn field during the harvest. This image represents the relationship between biotechnology and future crop development. The hologram is an embossed-type rainbow hologram. Holograms are best viewed when held flat and viewed either in direct sunlight or under a halogen-type spotlight that is at least 6 feet from their surface. Under ideal conditions, the viewer will perceive more than an inch of "true depth" between the foremost and rearmost planes of graphics. For a different experience, try viewing in a darkened room under candlelight. Cover design by Jennifer Turek Cortner, Monsanto Creative Services. Hologram produced by Peter Scheir, A D 2000 Inc.
