On the Cover: Germination of pea seeds on ice. Dry pea seeds were placed on ice in a covered polystyrene box that was stored at 1.5°C. Ice was changed weekly and the photograph was taken after 6 weeks. When transferred to soil, the ice-germinated seeds developed into healthy pea plants. Such a performance is likely to be related to the amazing temperature tolerance of seed mitochondria that are able to sustain oxidative phosphorylation at subfreezing temperatures, using exogenous NADH as a substrate (Stupnikova et al., pp. 326–335).

ON THE INSIDE

Peter V. Minorsky

BREAKTHROUGH TECHNOLOGIES

Agroinjection of Tomato Fruits. A Tool for Rapid Functional Analysis of Transgenes Directly in Fruit.
Diego Orzaez, Sophie Mirabel, Willemien H. Wieland, and Antonio Granell

BIOINFORMATICS

Nori Kurata and Yukiko Yamazaki

RESEARCH ARTICLES

BIOCHEMICAL PROCESSES AND MACROMOLECULAR STRUCTURES

Role of Petal-Specific Orcinol O-Methyltransferases in the Evolution of Rose Scent.

Nawroz Abdulrazzak, Brigitte Pollet, Jürgen Ehlting, Kim Larsen, Carole Assougli, Sebastien Ronseau, Caroline Proux, Mathieu Erhardt, Virginie Seltzer, Jean-Pierre Renou, Pascaline Ullmann, Markus Pauly, Catherine Lapierre, and Danièle Werck-Reichhart

[OA] ARABINAN DEFICIENT 1 Is a Putative Arabinosyltransferase Involved in Biosynthesis of Pectic Arabinan in Arabidopsis.
Jesper Harholdt, Jacob Krüger Jensen, Susanne Oxenbøll Sørensen, Caroline Orfila, Markus Pauly, and Henrik Vibe Scheller

[OA] An L-l-Diaminopimelate Aminotransferase Defines a Novel Variant of the Lysine Biosynthesis Pathway in Plants.
