## New Benefits for *Plant Physiology* Authors Who Are ASPB Members!

There are more reasons than ever to become a member of ASPB! Beginning with the January 2007 issue of *Plant Physiology*, corresponding authors who are members at the time of submission will get their article made freely available online and their first color figure free. The journal's Open Access feature, *Real-Time Plant Physiology*, means that anyone with an Internet connection will have instant access to the full-text, final article as soon as it is published (non-members can still purchase this option; see <http://www.aspb.org/publications/openaccess.cfm> for details).

### Other benefits of membership in ASPB include

- A \$20/page discount on page charges for articles published in *Plant Physiology* and *The Plant Cell* (corresponding author must be a member)
- Free electronic access to both journals and a discount on print subscriptions
- Discounted registration for ASPB meetings
- ASPB's bimonthly newsletter, the *ASPB News*
- Member prices for ASPB publications
- Access to the online membership directory
- Abstract submission for ASPB's annual meeting.

All these benefits and cost savings can be enjoyed for only \$115 for regular members, \$65 for postdocs, and \$45 for students. For more information or to join now, go to <http://www.aspb.org/memberjoin/?js=ppprint>.
