

The electronic form of this issue, available as of July 11, 2008, at [www.plantphysiol.org](http://www.plantphysiol.org), is considered the journal of record.

**On the Cover:** Dinoflagellates such as *Lingulodinium polyedrum* are unicellular photosynthetic marine protists. Cells are roughly spherical and are filled with an extensive and highly ramified array of chloroplasts, as seen here using confocal microscopy to visualize the natural fluorescence of chlorophyll inside the plastids. However, light harvesting is only half the story, as without an abundant electron sink, photosynthetic electron transport would grind to a halt. Unfortunately, the most efficient electron sink, carbon dioxide, is scarce in the marine environment, as most dissolved inorganic carbon is found as bicarbonate at the basic pH of seawater. *Lingulodinium* contains an external carbonic anhydrase that may help maintain CO<sub>2</sub> at its equilibrium concentration around the cell surface despite rapid photosynthesis rates. Photo by David Morse. (See Lapointe et al., pp. 1427–1436.)

## ON THE INSIDE

*Peter V. Minorsky* 933

## LETTER TO THE EDITOR

Is the Loss of Stability Theory a Realistic Concept for Stress Relaxation-Mediated Cell Wall Expansion during Plant Growth? *Peter Schopfer* 935

Response to Schopfer Letter. *Chunfang Wei and Philip M. Lintilhac*

## EDITOR'S CHOICE SERIES ON THE NEXT GENERATION OF BIOTECH CROPS

Nutritionally Improved Agricultural Crops. *Martina Newell-McGloughlin* 939

Improving the Content of Essential Amino Acids in Crop Plants: Goals and Opportunities. *Shai Ufaz and Gad Galili* 954

Enhancing Plant Seed Oils for Human Nutrition. *Howard G. Damude and Anthony J. Kinney* 962

Molecular Plant Breeding as the Foundation for 21st Century Crop Improvement. *Stephen P. Moose and Rita H. Mumm* 969

## UPDATES

Unraveling the Tapestry of Networks Involving Reactive Oxygen Species in Plants. *Frank Van Breusegem, Julia Bailey-Serres, and Ron Mittler* 978

## GENOME ANALYSIS

<sup>[OA]</sup>Multiple Models for Rosaceae Genomics. *Vladimir Shulaev, Schuyler S. Korban, Bryon Sosinski, Albert G. Abbott, Herb S. Aldwinckle, Kevin M. Folta, Amy Iezzoni, Dorrie Main, Pere Ariús, Abhaya M. Dandekar, Kim Lewers, Susan K. Brown, Thomas M. Davis, Susan E. Gardiner, Daniel Potter, and Richard E. Veilleux* 985

## BIOINFORMATICS

<sup>[W]</sup><sup>[OA]</sup>CressExpress: A Tool For Large-Scale Mining of Expression Data from Arabidopsis. *Vinodh Srinivasasainagendra, Grier P. Page, Tapan Mehta, Issa Coulibaly, and Ann E. Loraine* 1004

*Continued on next page*

## RESEARCH ARTICLES

## BIOCHEMICAL PROCESSES AND MACROMOLECULAR STRUCTURES

- <sup>[W][OA]</sup>Biochemical and Genomic Characterization of Terpene Synthases in *Magnolia grandiflora*.  
*Sungbeom Lee and Joseph Chappell* 1017
