

The electronic form of this issue, available as of March 11, 2010, at www.plantphysiol.org, is considered the journal of record.

On the Cover: Floods dramatically affect natural ecosystems and crop production. In this issue, Jung et al. (pp. 1674–1692) unravel dynamic adjustments of the transcriptomes of near-isogenic rice genotypes that differ in tolerance to prolonged submergence due to the presence or absence of the tolerance-conferring *Sub1A-1* ethylene-responsive transcription factor (ERF). They show that *Sub1A* influences gene networks that modulate hormone accumulation and response, central metabolism, elongation growth, and senescence. Also within this issue, Rocha et al. (pp. 1501–1513) utilize the waterlogging-tolerant species *Lotus japonicus* to investigate adjustments in central carbon and nitrogen metabolism that augment substrate level ATP production. The importance of production of the fermentation end products ethanol and lactate is long recognized. This new study associates the reaction of pyruvate with Glu to form Ala and oxoglutarate with a bifurcation of the tricarboxylic pathway that augments energy production in waterlogged roots. To further our understanding of acclimation to low-oxygen stress, including submergence and waterlogging, Mustroph et al. (pp. 1484–1500) performed a meta-analysis of the transcriptomic responses of four plant and 17 nonplant species (animals, fungi, and bacteria). Through recognition of gene orthologs, the study identifies conserved core adjustments in metabolism, heat shock protein induction, and reactive oxygen species metabolism. Despite commonalities in cellular response, the stress-regulated transcription factors and signaling protein mRNAs are poorly conserved across kingdoms. On pp. 1471–1483 of this issue, Banti et al. report that *Arabidopsis thaliana* heat shock factor A2 (*HsfA2*) is responsible for an overlap in the mechanisms of tolerance to heat shock and anoxia, with *HsfA2* overexpressors displaying markedly enhanced tolerance to low-oxygen stress. Cover image designed by Mathijs Vanwoerkum of Dorado Communications based on a concept from Pierdomenico Perata, Scuola Superiore Sant'Anna, Pisa, Italy.

ON THE INSIDE

Peter V. Minorsky 1107

GENOME ANALYSIS

^{[W][OA]}Genome-Wide Analysis of Ethylene-Responsive Element Binding Factor-Associated Amphiphilic Repression Motif-Containing Transcriptional Regulators in *Arabidopsis*. Sateesh Kagale, Matthew G. Links, and Kevin Rozwadowski 1109

BREAKTHROUGH TECHNOLOGIES

^{[W][OA]}Combined Bimolecular Fluorescence Complementation and Förster Resonance Energy Transfer Reveals Ternary SNARE Complex Formation in Living Plant Cells. Mark Kwaaitaal, Nana F. Keinath, Simone Pajonk, Christoph Biskup, and Ralph Panstruga 1135

^{[W][OA]}Imaging and Analysis Platform for Automatic Phenotyping and Trait Ranking of Plant Root Systems. Anjali S. Iyer-Pascuzzi, Olga Symonova, Yuriy Mileyko, Yueling Hao, Heather Belcher, John Harer, Joshua S. Weitz, and Philip N. Benfey 1148

^{[W][OA]}Generation of Backbone-Free, Low Transgene Copy Plants by Launching T-DNA from the *Agrobacterium* Chromosome. Heiko Oltmanns, Bronwyn Frame, Lan-Ying Lee, Susan Johnson, Bo Li, Kan Wang, and Stanton B. Gelvin 1158

BIOINFORMATICS

^[W]CORNET: A User-Friendly Tool for Data Mining and Integration. Stefanie De Bodt, Diana Carvajal, Jens Hollunder, Joost Van den Cruyce, Sara Movahedi, and Dirk Inzé 1167

SCIENTIFIC CORRESPONDENCE

^{[C][W]}Low Glucose Uncouples Hexokinase1-Dependent Sugar Signaling from Stress and Defense Hormone Abscisic Acid and C₂H₄ Responses in *Arabidopsis*. Young-Hee Cho, Jen Sheen, and Sang-Dong Yoo 1180
