

The electronic form of this issue, available as of September 13, 2010, at [www.plantphysiol.org](http://www.plantphysiol.org), is considered the journal of record.

**On the Cover:** Secondary cell wall thickenings from cultured *Zinnia elegans* tracheary elements are rich in lignocellulose and autofluorescent due to the presence of lignin (top image). The topography of the secondary cell wall can be visualized after generating cell fragments, which include rings of these secondary wall thickenings (bottom left; atomic force microscopy image). Closer examination of a region (box) within this ring reveals cellulose fibrils that are embedded in a granular matrix and organized in a parallel, concentric orientation (bottom right; atomic force microscopy image). To investigate the composition and structure of the cell wall of individual tracheary elements, Lacayo et al. (pp. 121–133) employed three imaging platforms in conjunction with chemical extraction and a fluorescent cellulose binding protein. Cultured tracheary elements from *Z. elegans* can provide important insights into cell wall development, organization, and dynamics, which are especially important in research on lignocellulosic biofuel production. Fluorescence microscopy image and cover design by Dr. Catherine Lacayo; atomic force microscopy images by Dr. Alexander Malkin.

## ON THE INSIDE

Peter V. Minorsky

1

## GENOME ANALYSIS

[W][OA] An Integrative Approach to Genomic Introgression Mapping. Andrew J. Severin, Gregory A. Peiffer, Wayne W. Xu, David L. Hyten, Bruna Bucciarelli, Jamie A. O'Rourke, Yung-Tsi Bolon, David Grant, Andrew D. Farmer, Gregory D. May, Carroll P. Vance, Randy C. Shoemaker, and Robert M. Stupar

3

[C][W][OA] The Association of Multiple Interacting Genes with Specific Phenotypes in Rice Using Gene Coexpression Networks. Stephen P. Ficklin, Feng Luo, and F. Alex Feltus

13

## BREAKTHROUGH TECHNOLOGIES

[C][OA] TILLING: A Personalized Approach to the Identification of Induced Mutations in Arabidopsis. Susan M. Bush and Patrick J. Krysan

25

## BIOINFORMATICS

[C][W][OA] Combining Machine Learning and Homology-Based Approaches to Accurately Predict Subcellular Localization in Arabidopsis. Rakesh Kaundal, Reena Saini, and Patrick X. Zhao

36

## RESEARCH ARTICLES

### BIOCHEMICAL PROCESSES AND MACROMOLECULAR STRUCTURES

[W][OA] Virus-Induced Gene Silencing of Plastidial Soluble Inorganic Pyrophosphatase Impairs Essential Leaf Anabolic Pathways and Reduces Drought Stress Tolerance in *Nicotiana benthamiana*. Gavin M. George, Margaretha J. van der Merwe, Adriano Nunes-Nesi, Rolene Bauer, Alisdair R. Fernie, Jens Kossmann, and James R. Lloyd

55

[W][OA] Enzymatic Functions of Wild Tomato Methylketone Synthases 1 and 2. Geng Yu, Thuong T.H. Nguyen, Yongxia Guo, Ines Schauvinhold, Michele E. Auldridge, Nazmul Bhuiyan, Imri Ben-Israel, Yoko Iijima, Eyal Fridman, Joseph P. Noel, and Eran Pichersky
