

## *Plant Physiology* Is Recruiting Assistant Features Editors

At the beginning of 2018, *Plant Physiology* welcomed 23 new Assistant Features Editors to the editorial board. Over the past 18 months, these early career scientists have brought their passion for science to the Journal, communicating to our readers some of the most exciting developments at the forefront of global research in plants today. Introducing the Assistant Features Editors to the Journal has proven a tremendous success. Their contributions have helped shape and expand our content through commentaries, blog posts, and related material that highlight *Plant Physiology* content of special interest. We are convinced, too, that they have gained professionally and will build on their experience going forward. For us, working with the Assistant Features Editors has been immensely satisfying.

We are now looking to expand and recruit a new cohort of Assistant Features Editors to join the *Plant Physiology* editorial board. This new cohort will work with the journal for 24 months beginning in January 2020. If you are interested in becoming an Assistant Features Editor, we are welcoming applications through Monday, September 30, 2019. Further details

of the activities of the Assistant Features Editors and how to apply are available online at <https://plantae.org/blog/plant-physiology-is-recruiting-associate-features-editors/>. We are interested in hearing about your current position and future goals and why you are interested in the position. We will need your curriculum vitae and the contact details of two individuals familiar with your work as a researcher. We will also expect two samples of your writing: one a first-authored paper and the other a sample News and Views commentary that you write on your selection of the *Plant Physiology* papers listed online. We hope to have selected the new Assistant Features Editors by late November.
