

Figure S5: Expression analysis of the *Rht-1* homoeologues in the *Rht-B1b* and *Rht-B1c* mutants. Relative expression levels of *Rht-A1* (A), *Rht-B1* (B) and *Rht-D1* (C) in two-week old seedlings of wheat NILs in the Maris Huntsman variety, determined by quantitative RT-PCR. Values shown are the means of three biological replicates, normalized against *UBIQUITIN*. Results are plotted as the ratio to the level in the *Rht-1* control, \pm SE. **significantly different from the *Rht-1* control ($P < 0.01$).
