Supplemental Figure 8. Substrate specificity of AtNANMT, AtCOMT, Smo438615 and Ppa012g019400 determined using \[^{14}C\]-SAM (40 µM) and cold NA or phenylpropanoids (100 µM) as cosubstrates. The reactions were incubated for 12 hours. N.C., negative control, in which no methyl acceptor chemical was added in the assay.
