The graph shows the respiration rate in nmol O₂ min⁻¹ DU⁻¹ for different conditions labeled as CCF, SCF, CSF, CCS, ECF, CEF, CCE, ACF, SSF, SEF, ESF, SSS, and ESE. Each condition is represented by different bars with error bars indicating variability. The y-axis is labeled as AOX1C. The x-axis represents different effector conditions. The legend indicates four categories: No effector, Pyruvate, Glyoxylate, and Succinate.
