Figure S7: Fv/Fm (maximum efficiency of photosystem II in dark acclimated conditions) normalized to the well-watered controls (100) for droughted (orange) and re-watered (green) plants from 4 to 14 days of drought. Error bars are standard errors (n = 8). Stars represent the significance of $P<0.01$ (*) or $P<0.001$ (**).
