Supple Figure 6. Time-course observation of *J0571* with the activation of *pWOL:icalsm*. All seedlings were treated by estradiol for 0d, 2d, 3d and 4d (as marked). The variation of *J0571* fluorescent intensity was shown from the highest level to the lowest level (from left to right) for each treatment. The gradient of green color above each panel shows the trend of varied fluorescence intensity in each treatment.
